

INCOS ENGINEERING WORKSHOP IN A BOX

OFFSHORE & ONSHORE APPLICATIONS

Testing and servicing fire fighting systems

The Workshop in a Box is a modified 10' shipping container allowing for easy transportation to site.

Don't fail your front line teams:

Organising fire protection system testing is not always easy. The most commonly complained about reason for wasting time is not having the tools and equipment ready when the specialists arrive.

The Incos Workshop in a Box is a dedicated work area specifically designed to allow our skilled technicians and engineers to support operations throughout a campaign. All equipment is loaded and QC checked prior to dispatch from our facility in Perth.

Inclusions:

- Calibrated Pressure gauges and Flow meters
- Test equipment to suit the campaign
- Specialised tools
- Spare parts/consumables

Being a dedicated fire fighting systems workshop, Incos Engineering will work with your team to coordinate any required items needed to optimise available site time.
